No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Sequence 13, Application US/09009217
Patent NO. 6132729
GENERAL INFORMATION:
APPLICANT: Thorpe, Philip E.
APPLICANT: King, Steven W.
APPLICANT: Gao, Boning
TITLE OF INVENTION: CCMBINED TISSUE FACTOR AND
TITLE OF INVENTION: CHEMOTHERAPEUTIC METHODS AND COMPOSITIONS FOR COAGULATION
NUMBER OF SEQUENCES: 27
CORRESPONDENCE ADDRESS:
ADDRESSEE: Annold, White & Durkee
STREET: P.O. Box 4433
CITY: HOUSEON
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             928 gtcatcatcaccacacacactgttctgacggttccatcctggccatcgcctgctgatc 987

/nab_nooped brain, lung, testis; Vector:
    pCMV-SPORT6; Site_1: Not1; Site_2: ECORV (destroyed); RNA
    source annonymous pool of male brains, age range 23-27; 1
    male lung, age 27; and 1 male testis, age 69. Library is
    oligo-dr primed and directionally cloned (ECORV site is
    elserroyed upon cloning). Average insert size 1.8 kb,
    insert size range 1-3 kb. Library is normalized and
    enriched for full-length clones and was constructed by C.

Division of Experimental Animal Research in Riken contributed to prepare mouse tissues. First strand cDNA was primed with a primer [5' GAGAGAGAGATCCAAGAGCTCTTTTTTTTTTTTTTVN 3'], cDNA was prepared by using trehalose thermo-activated reverse transcriptase and subsequently enriched for full-length by cap-trapper. CDNA went through one round of normalization to Rot = 7.5 and subtraction to Rot = 37.5. Second strand cDNA was prepared with the primer adapter
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           IITTTHCSDGSILAIALLVLFLLLAIALLWWFWPLCCTVIIKEVPPPVEESEEEDDD
